Contents

1. ER Diagram

2. Software Stack
    - *2.1. Frontend*
    - *2.2. Backend*
    - *2.3. Database*
    - *2.4. Server*

3. UI Wireframes

1. ER Diagram:

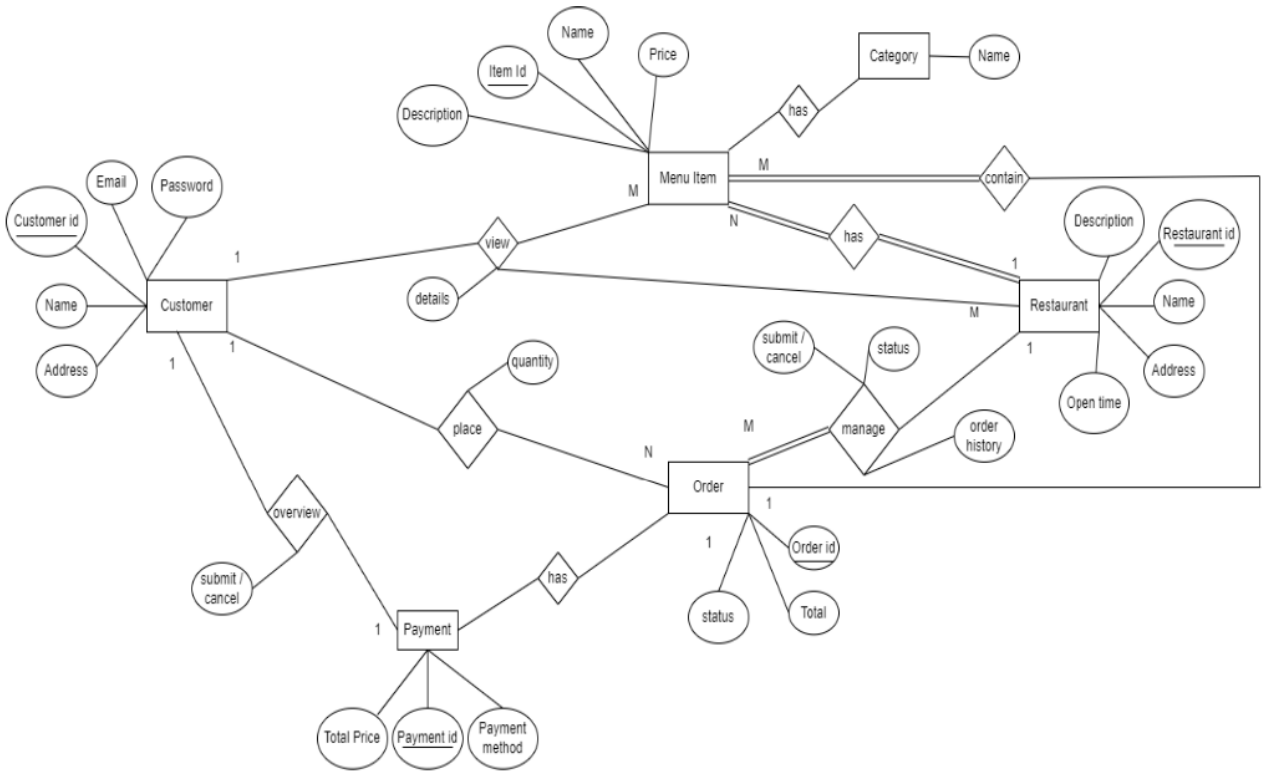

Figure 1.1: ER Diagram

2.Software Stack:

2.1 Frontend (HTML, CSS, JS):

- Responsible for the user interface and user experience.
- Allows users to interact with the website, view menu items, and place orders.

2.2 Backend (Node.js):

- Handles business logic, processes user requests, and communicates with the database.
- Generates dynamic content for the frontend based on user interactions.
- Node.js is chosen as the backend technology, indicating that server-side

  JavaScript is used for handling server operations.

2.3 Database (SQLite):

• Stores data related to restaurant food items, orders, and user information.

2.4 Server (XAMPP Localhost):

- Provides a local server environment for testing and development.
- XAMPP is a cross-platform web server solution that includes Apache, MySQL

  (or SQLite in our case), PHP, and Perl.

- Emulates the server setup used in a production environment, allowing developers to test and develop their application locally.
